

BT  
extracted in the extraction step; and

a data code signal of a transmission step of transmitting the information identification code stored in the storage step to the external device.

28. (New) A computer data signal for controlling a portable terminal apparatus, said signal program comprising:

a data code signal of a display step of displaying received information;

a data code signal of an extraction indication step of indicating an extraction of an information identification code and indicating transmission of the information identification code to an external device;

a data code signal of an extraction step of, when an extraction of an information identification code is indicated in the extraction indication step, extracting an information identification code from the information displayed in the display step;

a data code signal of a storage step of storing the information identification code extracted in the extraction step; and

a data code signal of a transmission step of, when a transmission of an information identification code is indicated in the extraction indication step, transmitting the information identification code stored in the storage step to the external device.

#### REMARKS

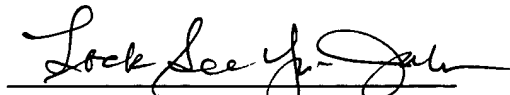

Claims 6-14 and 17-28 are presented for examination, with Claims 6, 7, 14, and 21-24 having been amended by the present Amendment. Claims 15 and 16 have been canceled, without prejudice or disclaimer of the subject matter presented therein, and new Claims 25-28

have been added to provide Applicants with a more complete scope of protection. Claims 6, 14, and 21-28 are in independent form.

An early and favorable examination on the merits is respectfully requested.

Applicants' undersigned attorney may be reached in our New York Office by telephone at (212) 218-2100. All correspondence should continue to be directed to our address listed below.

Respectfully submitted,

NY\_MAIN 202802 v 1

Application No. 09/547,398  
Attorney Docket No. 862.C1893

VERSION WITH MARKINGS TO SHOW CHANGES MADE TO CLAIMS

6. (Amended) A portable terminal apparatus for communicating with an external device, comprising:

an indicator for indicating an extraction of an information identification code;

an extraction unit for, when an extraction of an information identification code from the external device is indicated by said indicator, extracting an information identification code from information received from the external device;

a memory for storing [an] the information identification code [received from the external device] extracted by said extraction unit; and

a transmitter for transmitting the information identification code stored in said memory to the external device.

7. (Amended) The apparatus according to claim 6, wherein said transmitter comprises a transmission [circuit] unit for transmitting data via at least one of a cable and radio waves.

RECEIVED

OCT 01 2001

Technology Center 2000

14. (Amended) A portable terminal apparatus comprising:

a display for displaying received information;

an indicator for indicating an extraction of an information identification code and indicating transmission of the information identification code to an external device;

a extraction unit for, when an extraction of an information identification code is indicated by said indicator, extracting an information identification code from the information displayed by said display; [and]

a memory for storing the information identification code extracted by said extraction unit; and

a transmitter for, when transmission of an information identification code is indicated by said indicator, transmitting the information identification code stored in said memory to the external device.

15. (Canceled)

16. (Canceled)

21. (Amended) A method of controlling a portable terminal apparatus for communicating with an external device, said method comprising:

an extraction indication step of indicating an extraction of an information identification code;

an extraction step of, when an extraction of an information identification code from the external device is indicated in said extraction indication step, extracting an information identification code from information received from the external device;

a storage step of storing [an] the information identification code [received from

the external device] extracted in said extraction step; and

a [sending] transmission step of [sending] transmitting the information identification code stored in said storage step to the external device.

22. (Amended) A method of controlling a portable terminal apparatus, said method comprising:

a display step of displaying received information;

an extraction indication step of indicating an extraction of an information identification code and indicating transmission of the information identification code to an external device;

an extraction step of when an extraction of an information identification code is indicated in said extraction indication step, extracting an information identification code from the information displayed in said display step; [and]

a storage step of storing the information identification code extracted in said extraction step; and

a transmission step of, when transmission of an information identification code is indicated in said extraction indication step, transmitting the information identification code stored in said storage step to the external device.

23. (Amended) A computer-readable storage medium storing a program for implementing a method of controlling a portable terminal apparatus for communicating with an

external device, the program comprising:

program code of an extraction indication step of indicating an extraction of an information identification code;

program code of an extraction step of, when an extraction of an information identification code from the external device is indicated in the extraction indication step, extracting an information identification code from information received from the external device;

program code of a storage step of storing [an] the information identification code [received from the external device] extracted in the extraction step; and

program code of a [transmitting] transmission step of transmitting the information identification code stored in the storage step to the external device.

24. (Amended) A computer-readable storage medium storing a program for implementing a method of controlling a portable terminal apparatus, the program comprising:

program code of a display step of displaying received information;

program code of an extraction indication step of indicating an extraction of an information identification code and indicating transmission of the information identification code to an external device;

program code of an extraction step of, when an extraction of an information identification code is indicated in the extraction indication step, extracting an information identification code from the information displayed in the display step; [and]

program code of a storage step of storing the information identification code

extracted in the extraction step; and

program code of a transmission step of, when a transmission of an information  
identification code is indicated in the extraction indication step, transmitting the information  
identification code stored in the storage step to the external device.

NY\_MAIN 202800 v 1

VERSION WITH MARKINGS TO SHOW CHANGES MADE TO CLAIMS

14. (Thrice Amended) A portable terminal apparatus comprising:

a display for displaying received information;

an indicator for performing an extraction of an information identification code and indicating a transmission of the information identification code to an external device, which acquires information corresponding to the information identification code by a same single physical key by a single operation, wherein the information identification code specifies information stored in the external device and indicates to the external device to display a window for designating printing conditions of the information;

an extraction unit for, when an extraction of an information identification code is indicated by said indicator, extracting [an] at once all of an extractable information identification code from the information displayed by said display;

a memory for storing the information identification code extracted by said extraction unit; and

a transmitter for, when transmission of an information identification code is indicated by said indicator, transmitting at once all of the information identification code stored in said memory to the external device.

Claim 17 has been canceled.

22. (Thrice Amended) A method of controlling a portable terminal apparatus, said method comprising:

- a display step of displaying received information;
- an extraction indication step of performing an extraction of an information identification code and indicating a transmission of the information identification code to an external device, which acquires information corresponding to the information identification code by a same single physical key by a single operation, wherein the information identification code specifies information stored in the external device and indicates to the external device to display a window for designating printing conditions of the information;
- an extraction step of, when an extraction of an information identification code is indicated in said extraction indication step, extracting [an] at once all of an extractable information identification code from the information displayed in said display step;
- a storage step of storing the information identification code extracted in said extraction step; and
- a transmission step of, when transmission of an information identification code is indicated in said extraction indication step, transmitting at once all of the information identification code stored in said storage step to the external device.

24. (Thrice Amended) A computer-readable storage medium storing a program for implementing a method of controlling a portable terminal apparatus, the program comprising:

program code of a display step of displaying received information;

program code of an extraction indication step of performing an extraction of an information identification code and indicating a transmission of the information identification code to an external device, which acquires information corresponding to the information identification code by a same single physical key by a single operation, wherein the information identification code specifies information stored in the external device and indicates to the external device to display a window for designating printing conditions of the information;

program code of an extraction step of, when an extraction of an information identification code is indicated in the extraction indication step, extracting [an] at once all of an extractable information identification code from the information displayed in the display step;

program code of a storage step of storing the information identification code extracted in the extraction step; and

program code of a transmission step of, when a transmission of an information identification code is indicated in the extraction indication step, transmitting at once all of the information identification code stored in the storage step to the external device.

26. (Twice Amended) A computer program product embodying a program for implementing a method of controlling a portable terminal apparatus, said program product comprising:

program code of a display step of displaying received information;

program code of an extraction indication step of an extraction of an information identification code and indicating a transmission of the information identification code to an external device, which acquires information corresponding to the information identification code by a same single physical key by a single operation, wherein the information identification code specifies information stored in the external device and indicates to the external device to display a window for designating printing conditions of the information;

program code of an extraction step of, when an extraction of an information identification code is indicated in the extraction indication step, extracting [an] at once all of an extractable information identification code from the information displayed in the display step;

program code of a storage step of storing the information identification code extracted in the extraction step; and

program code of a transmission step of, when a transmission of an information identification code is indicated in the extraction indication step, transmitting at once all of the information identification code stored in the storage step to the external device.

28. (Twice Amended) A computer data signal for controlling a portable terminal apparatus, said signal program comprising:

a data code signal of a display step of displaying received information;

a data code signal of an extraction indication step of performing an extraction of an information identification code and indicating a transmission of the information identification

code to an external device, which acquires information corresponding to the information identification code by a same single physical key by a single operation, wherein the information identification code specifies information stored in the external device and indicates to the external device to display a window for designating printing conditions of the information;

a data code signal of an extraction step of, when an extraction of an information identification code is indicated in the extraction indication step, extracting [an] at once all of an extractable information identification code from the information displayed in the display step;

a data code signal of a storage step of storing the information identification code extracted in the extraction step; and

a data code signal of a transmission step of, when a transmission of an information identification code is indicated in the extraction indication step, transmitting at once all of the information identification code stored in the storage step to the external device.
